

General Instruction

Environmental Goals and Policy, Admin No. 1-A

At CompreVac, our environmental focus areas are on our impact on the atmosphere and our shared natural resources, also the biodiversity of our planet:

- Atmosphere: To totally eliminate any emissions of greenhouse gases from our work with refrigeration equipment.
- Natural Resources: To ensure natural resource conservation through operational improvements and selective products and consumables.
- Biodiversity: To contribute to biodiversity through habitat enhancement and through environmental education of our employees and customers.
- International: To aid and educate people of third world countries in support of environmental improvements.
-

As of February 2015, we have set the following goals for these focus areas:

- Atmosphere: We have established strict control over methods and procedures when involved in refrigeration repairs or service. **Our goal of 100% elimination of refrigeration gases in the course of our total operations.**
- Natural Resources: Continual improvement of waste generation and recycling, toward 100% beneficial reuse, and also reducing product weight per service unit while maintaining or improving products quality and safety.
- Biodiversity: To engage in our community, educating and promoting biodiversity enhancement and improving wildlife habitat on our own facility.
- International: Supporting the education, physical and mental health and wellbeing of the Acholie People of Northern Uganda, by organising and contributing in sending short term medical and educational teams.
